

Empowering The Internet and IT infrastructure for Philippine National Police

The Philippine National Police (PNP), as the nation's primary law enforcement agency, plays a vital role in safeguarding the public. In today's digital age, the efficiency and reliability of their communication infrastructure are critical to their operational success. This is where bedoo, a pioneering MSP provider, has made a profound difference, reshaping how the PNP communicates, trains, and responds to emerging IT challenges.

Before Bedoo's involvement, the PNP Training Institute its various offices encountered substantial issues with their internet and IT connectivity. They faced challenges with slow and unreliable internet connectivity, hindering their training, communication, and operational efficiency. These challenges impeded the delivery of online training, restricted access to important databases, and delayed communication between field officers and headquarters, all of which had a direct impact on the PNP's ability to serve and protect the public effectively.

bedoo's solutions

bedoo provided high availability (unbreakable) high-speed internet service to the remote facility, 24/7 managed network service, network security to prevent extended outages from multiple causes, and online training via the workspace platform, transforming the PNP's communication and IT infrastructure.

Results:

Enhanced Training

Cadets and officers now have access to online training materials and participate in virtual sessions.

Operational Efficiency

Seamless access to databases and surveillance technologies facilitates investigations and crime prevention.

Improved Communication

Real-time communication between field officers and headquarters enables faster responses to emergencies.

Strong Partnership

Bedoo's focus on deep customer service through technology and managed services has built a reliable and trusting relationship.
